1 Executive Summary

2 Triage & File Identification

Note about this section:

I began this lab with the Windows environment that I have been using for the entire semester. When running the EICAR test, I was receiving no reaction from Windows Defender. I attempted numerous workarounds, troubleshooting techniques and tests but Defender never caught onto the code. To make sure that my eyes were not failing, I ran a comparison algorithm on the test command and ask Claude to double check my input as well and it was confirmed that the command was correct and Defender should have flagged it. With all of these steps taken, I decided to begin the lab again with a fresh Windows build.

3 Static Analysis

4 Dynamic Analysis

5 IOC Report & Detection

++report written and formatted with help from Claude (Sonnet 4.6)++
